Med anledning av att [REDACTED] har licens på en Kolsyrepistol av fabrikat Hämmerli, kal. 4,5 mm uppkom frågan huruvida en sådan kan tas för en revolver.

Med anledning av detta kontaktades vapenfirman [REDACTED] AB, Klara Norra Kyrkogata 26 i Stockholm, tfn. 08-14 38 65. Där uppgav man att den aktuella pistolen ser ut som en kraftig luftpistol för tävlingskytte. Man hade vidare broschyrer på den modell som nu saluförs, vilken inhämtades och bifogas uppslaget. De kunde vidare lämna tfnnummer till generalagenten för Hämmerli.

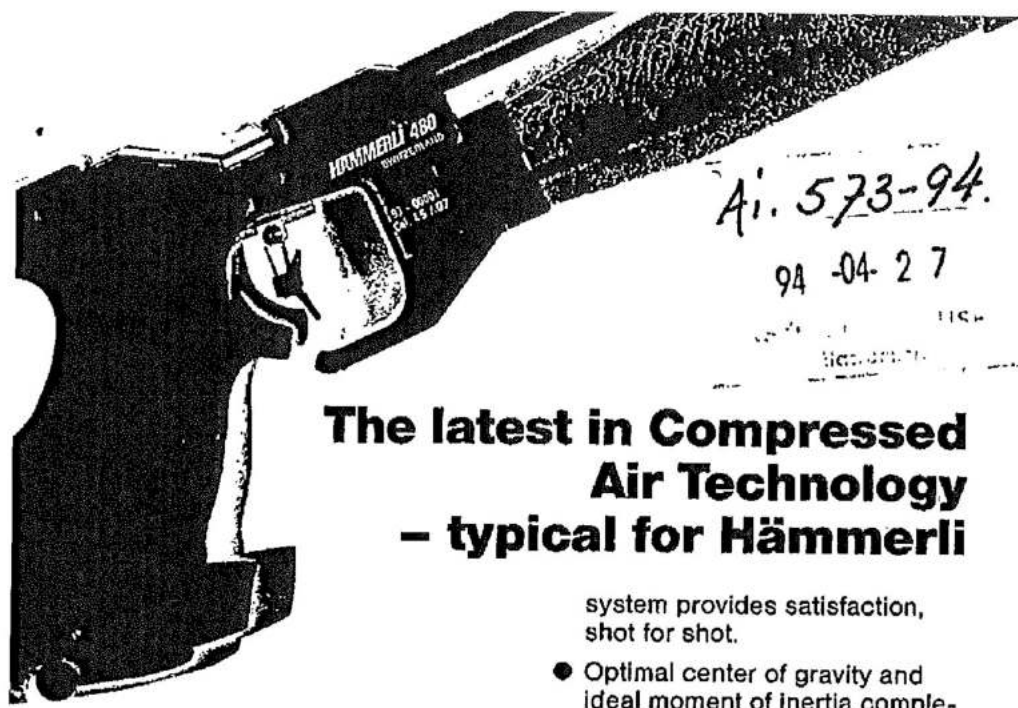

Generalagenten, HÅ Sport AB, Nordhemsvägen 1, 263 58 HÖGANÄS, tfn. 88 042-33 35 30 kontaktades per tfn. [REDACTED], vilken innehar firman tillsammans med sin man [REDACTED], uppgav att Hämmerli aldrig tillverkat någon kolsyrepistol i revolvermodell. De har alltid, så vitt hon kände till, sett ut som en kraftig tävlingsluftpistol.

Stockholm dag som ovan.

ANVANDH 5858-A

The latest in Compressed Air Technology - typical for Hämmmerli

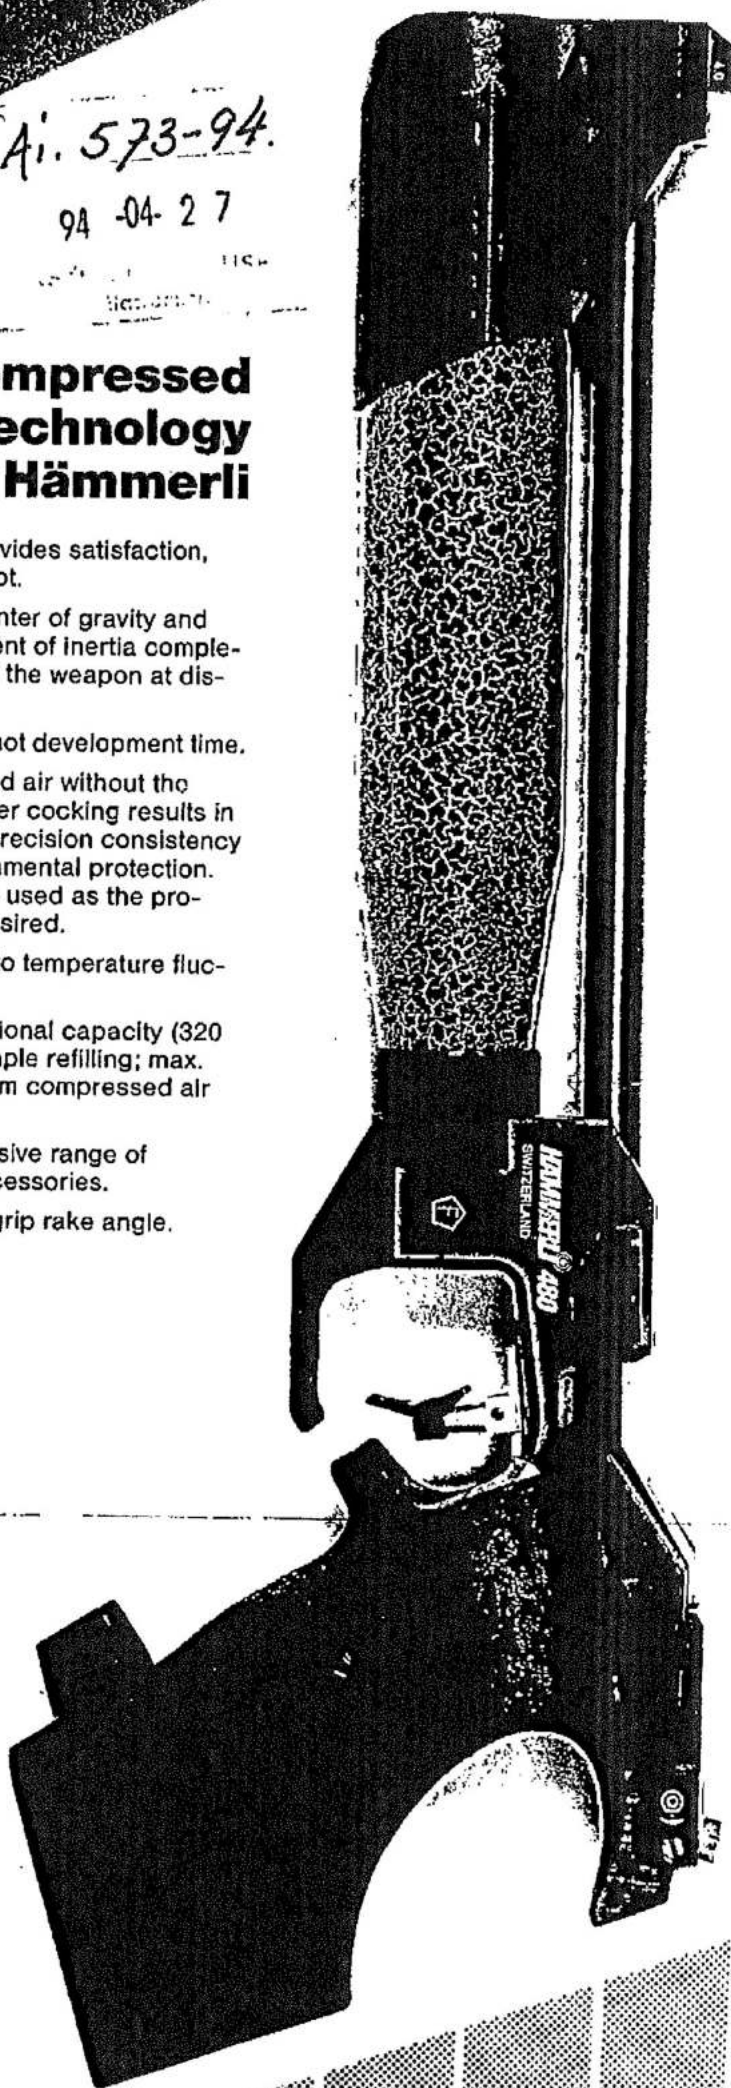

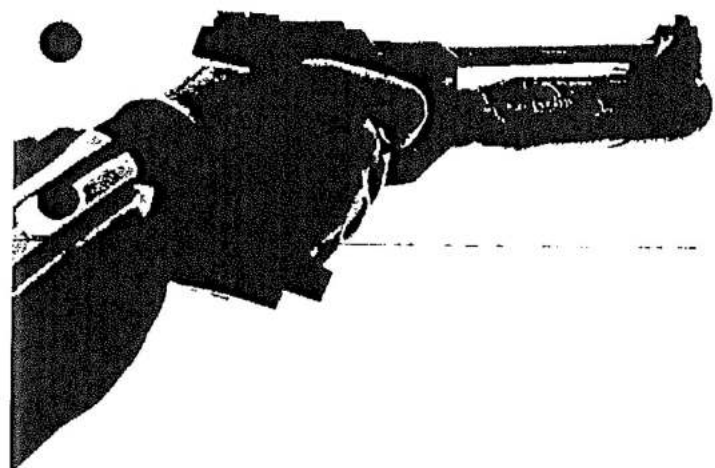

● "Innovative and superior in all respects". This is the unanimous opinion of a broad selection of top level marksmen and women who are already shooting with the brand new Hämmmerli model 480 Match air pistol.

State-of-the-art, practically inspired technology incorporating years of know-how have been combined to provide you, the shooter, with consistently better results.

- Absolutely world class accuracy.
- Extremely sophisticated trigger

system provides satisfaction, shot for shot.

- Optimal center of gravity and ideal moment of inertia completely control the weapon at discharge.
- Ultra fast shot development time.
- Compressed air without the effort of lever cocking results in maximum precision consistency and environmental protection. CO₂ can be used as the propellant if desired.
- Insensitive to temperature fluctuations.
- High operational capacity (320 shots) - simple refilling; max. 1 minute from compressed air bottle.
- Comprehensive range of optional accessories.
- Adjustable grip rake angle.

HÄMMERLI  **480**

Environmental protection:

Compressed air eliminates lever cocking action. CO₂ can be used at any time.

Adjustment potential of the sophisticated trigger action reflects the practical recommendations of international class marksmen.

Superb precision – CAD/CNC technology:

Light-alloy receiver machined from the solid.

Advanced material combinations:

Carbon fiber wrapped light-alloy cartridge – finite element analysis used in design process.

Simple refilling:

With compressed air (or CO₂). Refilling from the compressed air bottle takes barely 1 minute.

320 shots from the filling with absolutely consistent accuracy.

This new Hämmerli compressed air match pistol will provide consistently superior results for shooters at all performance levels.

Technical Specifications**Hämmerli 480 Match Air Pistol**

Length, overall	max. 420 mm
Height, overall	max. 200 mm
Width, overall	max. 50 mm
Total weight	ca. 1050 g
Sight radius	340 mm
Sights	Quick change rearsight blade
Sight adjustment	Per click, 2 mm at 10 m
Barrel length	250 mm
Caliber	4,5 mm/.177
Cartridge	Service pressure max. 200 bar
Muzzle energy	max. 7,5 J (Joules)
Propellant	Air or CO ₂ (from same weapon)
Operational capacity	Air: 320 shots CO ₂ : 200 shots
Grips	Walnut 7° rake adjustment

Models: Standard right/left hand
Small right/left hand

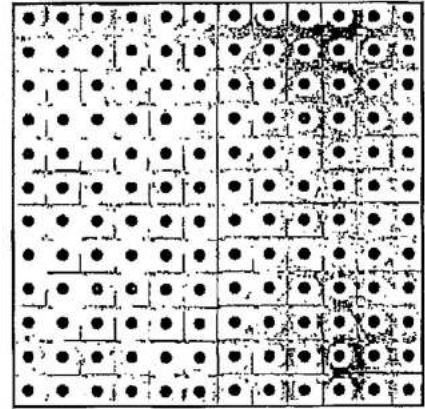

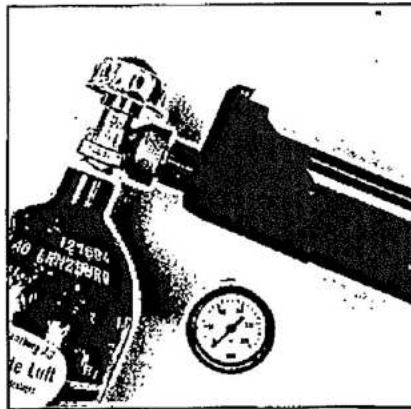

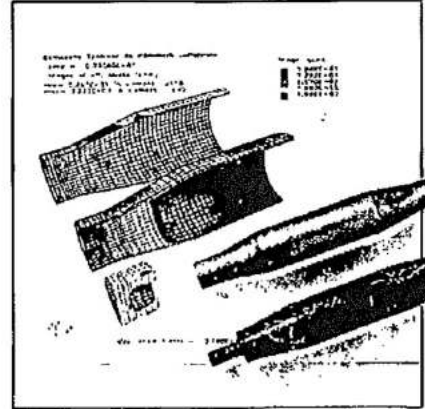

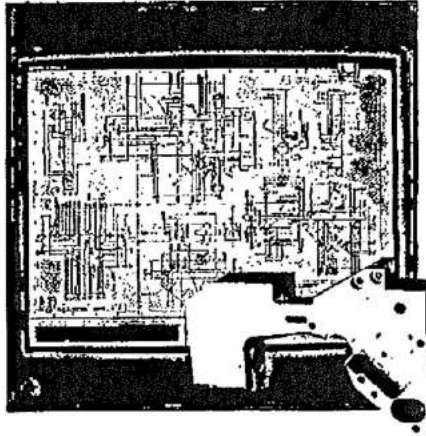

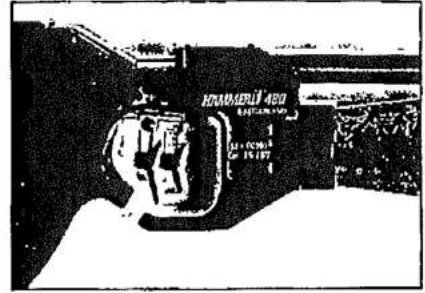

Subject to change without notice.
